

STREAM CONTINUITY ENFORCEMENT

ABSTRACT OF THE DISCLOSURE

A system for enforcing data stream continuity, in
5 accordance with the present invention, includes a server
coupled to a transmission link for providing a data stream
to at least one client over the transmission link. The data
stream is segmented into units. The server includes a
scrambler for encrypting at least one first unit using an
10 encryption key, and a steganographic unit for embedding the
encryption key into at least one second unit for the data
stream such that steganographic information is needed by the
client to determine the encryption key and decipher the data
stream.
